CONSULTANCY PROJECT REPORT

OBJECTIVE:

Inventory Management Software is used to examine the stock available in stores. This software is used to record the details of each transaction. It contains customer list, supplier list, product list, purchase order, sales order and dashboard.

PROJECT DESCRIPTION

The cashiers provide product descriptions and unit prices that are stored in the Sales and Inventory System databases. If the customers desired to acquire a product, the employees could utilize the system to record the goods they had bought from the clients and then save that record. To process the sales, the cashier receives the records from the workers. The staff gives the records to the cashier to process the sales. After the process, the cashier would generate a receipt to be given to the customer. The manager will check the inventory records if there are products needed to stock in or stock out. If the manager noticed that there are out-of-stock products, the manager will order products to the supplier to be saved to stock in item records.

The purpose of Inventory system is to serve customers efficiently. The aim is to help the employees of different company make their work faster by using the system where they can observe the remaining products in the records where they can see in the database. The system will provide a good service to the company like better transaction process that brings bigger profit.

Dr. G. Balakrishnan, M.E., Ph.D.,

Manikandam, Trichy-620 012.

CONCLUSION

The inventory management is used to make the process fast and accurate in the recording of sales and inventory. This makes effective and efficient sales and inventory system that can properly monitor the flow of the products from the sales and inventory. It becomes big to track the goods of sales and inventory.
